A Great Option for Multi-shift Operations Repetitive Material Handling Processes and/ or Movement of Standardized Loads, such as Industrial Pallets.

Custom Equipment Designed for High-lifting Reach Truck Applications. Perfect Fit for Distribution Centers, Warehouses and Replenishment of Active Picking Locations.

Automated Guided Vehicle System Solutions

The interest in workplace automation is rapidly increasing. Using technology for repeatable or predictable tasks can help worksites boost efficiency and production. Have you considered automation yet? If not, it's time to look at the automated forklifts on the market.

What are automated forklifts? Automated forklifts, sometimes referred to as autonomous forklifts, robotic forklifts or Automated Guided Vehicles (AGV), use advanced computer technology and AI, allowing them to self-drive and lift and even sense human activity around them and move accordingly.

When AGV's Just Make Sense:

- Labor Shortage
- Improved Safety
- Consistent Throughput
- Repetitive Process - *Big or Small*
- Hazardous Tasks
- Lights Out Operation

We have specialists who have experience building AGVs and offer reliable support. You'll get peace of mind throughout the entire service life of your system, from the planning phase to implementation and service.
